| <p>The current Airbus IAM self-service ecosystem is fragmented across multiple tools handling password resets, group management, account lifecycle, access provisioning and SSO connectors management independently.</p> <p>The One Self-Service Cockpit project delivers a unified, secure, and intelligent platform that modernizes Airbus commercial workforce identity management—covering accounts, access lifecycles, SSO, recertification, and centralized governance.</p> |  |                | <p><b>1. Unify Self Service Platform :</b> Deliver a single cockpit consolidating account, group, and access lifecycle management for a consistent user experience.</p> <p><b>2. Future-Ready IAM Foundation:</b> Build a modern, extensible platform ready for AI-driven governance, analytics, and adaptive authentication.</p> <p><b>3. Automate Lifecycle Management:</b> Implement automated provisioning, modification, and deprovisioning workflows for user, group, and account lifecycles to minimize manual interventions.</p> <p><b>4. Continuous Compliance:</b> Enable automated recertifications and access reviews to maintain compliance and minimize access risks.</p> <p><b>5. Enhance Security and Governance:</b> Standardize approval workflows, enforce central policies, and ensure full auditability of access activities.</p> <p><b>6. Operational Efficiency &amp; Scalability :</b> Lower service demand and improve scalability through automation and a microservice-based architecture.</p> |  |         | <p><b>1. User Experience Modernization</b> Reimagine IAM self-service through a unified, intuitive cockpit with harmonized UX, responsive design, accessibility, and guided workflows.</p> <p><b>2. Platform Convergence &amp; Integration</b> Consolidate existing IAM tools (myPassword, MyAppConnect, MyAccess, MyAccount) into a single, scalable, and modular platform—reducing duplication and operational overhead.</p> <p><b>3. Security &amp; Compliance by Design</b> Embed security, auditability, and compliance in every workflow—approvals, access reviews, and deprovisioning—ensuring stronger adherence to Airbus security standards like Zero Trust etc.</p> <p><b>4. Operational Efficiency &amp; Automation</b> Automate repetitive IAM tasks and enable self-healing for common issues (e.g., password unlocks, lifecycle management), driving reduction in manual operations and faster turnaround.</p> <p><b>5. Scalability &amp; Future-Readiness:</b> Build on modular microservices and open APIs to support next-gen capabilities like Just-in-Time access and AI-driven governance—establishing a future-ready IAM foundation.</p> |  |         |
| Project Scope                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |         | Main Deliverables                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |         |

## Appendix

# One Self-Service Interface for seamless Identity and Access Management

Creating an unified cockpit driven by AI, Automation and Security by Design, managing all IAM assets

## Challenges

Reliability &  
Resilience

Adaptability

Complexity

Security

Cost

## Strategy

# As-Is view: Diverse IAM Assets, Complex User Journey in Decentralized Applications

## Reasoning

Some of the key challenges:

**Complexity** of managing multiple IAM assets

User Experience issues leading to **high** Incidents/Requests

Regulating **Compliance**

Scalability & Adaptability

# To-Be view: One Self-Service Cockpit - MyIAM

## Objective

Some of the key advantages:

**Customer Centric Approach** to do a task right first time around

Natural language processing for **Policy Based Access Control**

Key Outcomes :

- Reduction 11 apps to One**  
**Improvement in Operations**
- Requests ( 90%)
  - Incidents ( 75%)

---

Thank you!
